Sage X3 Geode
Warehouse management for growing, global enterprises

Sage X3 Geode enables midsize and growing distribution companies to meet the competitive challenges they face in an increasingly complex, global marketplace. Sage X3 Geode is a versatile Warehouse Management System (WMS) designed for mid-sized manufacturers, distributors, and 3rd party Logistics, and is an ideal solution for companies that require more sophisticated warehousing functionality. Sage X3 Geode helps companies move from basic inventory control or radio frequency-based stock locator systems to a truly configurable, rules-based WMS.

A faster, simpler, more flexible warehouse management solution

Sage X3 Geode runs every aspect of your distribution business faster, more simply, and far more flexibly than ever before. Leveraging a history of over 30 years in delivering business applications for the wholesale distributors, this new solution from Sage offers you a completely new, extremely powerful enterprise application built from the ground up to address the complexity and risks faced by today's mid-tier to larger distribution enterprises.

Distribution and logistical answers

Sage X3 Geode delivers a data-driven, unified experience built on the proven Sage X3 platform. This solution offers comprehensive capabilities for complete supply chain management, including: item and container management, stock management and transfers, automatic/manual order launching, multi-picking processes, multi-site dispatch management, and receiving.

Global scalability

Sage X3 Geode is easily scalable, so you'll never run out of capacity again, and it quickly adapts to your changing needs, driving efficiency and helping you manage costs and throughout every step in the supply chain. It's also optimized for multi-site, multi-country,

multi-entity warehousing – with all your organization's financial data, reporting, purchasing, compliance, and processes rolling up into one system.

Key benefits for your distribution enterprise:

Get more done, faster
Increase user productivity and accelerate adoption with an intuitive web interface – easily personalized to work the way your users work – driving efficiency to save time, and lower overhead and operational costs.

Optimize warehouse space
Powerful optimization algorithms create a three-dimensional model of the warehouse space and the movements within the main aisles.

Drive efficiency in your operations
Organize and streamline employees' activities within the warehouse, by measuring and distributing the workloads and assigning responsibilities to users. Advanced functions enable you to anticipate fluctuations in levels in productivity and other activities and keep management well informed.

Meet global challenges
Expand your company's reach with multi-country, multi-entity, multi-language, multi-warehouse, and multi-site capabilities in a scalable, quick-to-implement WMS solution.

Improve service levels
Precisely and carefully trace every operation carried out in the warehouse, reducing the number of picking and packing errors and speeding your order processing, and ultimately, improving the quality of your customer service.

Key Features

Receiving

- Delivery bay and carrier meeting schedule
- On-the-fly reception
- Cross docking
- Sampling and quality control upon receipt

Location addressing

- Multiple products, multiple batches, and multiple consignors
- Local picking
- Container equivalence
- Dynamic location management

Picking and packing

- Optimized container packing
- Operator movement optimization
- Advanced packing assistance functions
- Multi-mode preparation management
- Wave simulations and shipment planning

Shipping

- Stock on dock management
- Multi-site delivery
- Round management and pre-invoicing
- Printing carrier documents
- Customer-specific labeling

Stock handling

- Cycle count
- Container management
- Assembly order management
- Automated replenishment management
- Quality control
- Slotting optimization
- EAN code support

Workflow and automated alerts

- Embedded workflow automation and alerts
- Role-based workspace and dashboards
- Automated project and role-based access controls

Technology and integration

- Operates as a stand-alone WMS or as a fully integrated component of Sage X3
- Integrates seamlessly with automated conveyor systems

Project management

- Project cash flow
- Subcontractor management
- Project costing
- Contract management
